Development Plans

1. List of JavaScript functions I plan to implement:

   a. DOM manipulation

   b. Google Maps API

   c. Geolocation Brower API

   d. Form validation

   e. jQuery carousel

   f. jQuery tabs

2. Implementation:

I plan to implement DOM manipulation in the countdown timer of the promotion header. On the contact page, I will use Google Maps API to embed an interactive map centered on the location of Says It With Sweets. Additionally, I will use form validation on the email list form to ensure that all required fields are filled out correctly. For the baked goods subsections (cookies, cupcakes, custom), I will use jQuery tabs and show images using jQuery carousels. This allows users to easily navigate through the offerings.
